

Length

Getting the length of your steel wire rope fabrication is very important, please tell us the length of the cable in the following formats

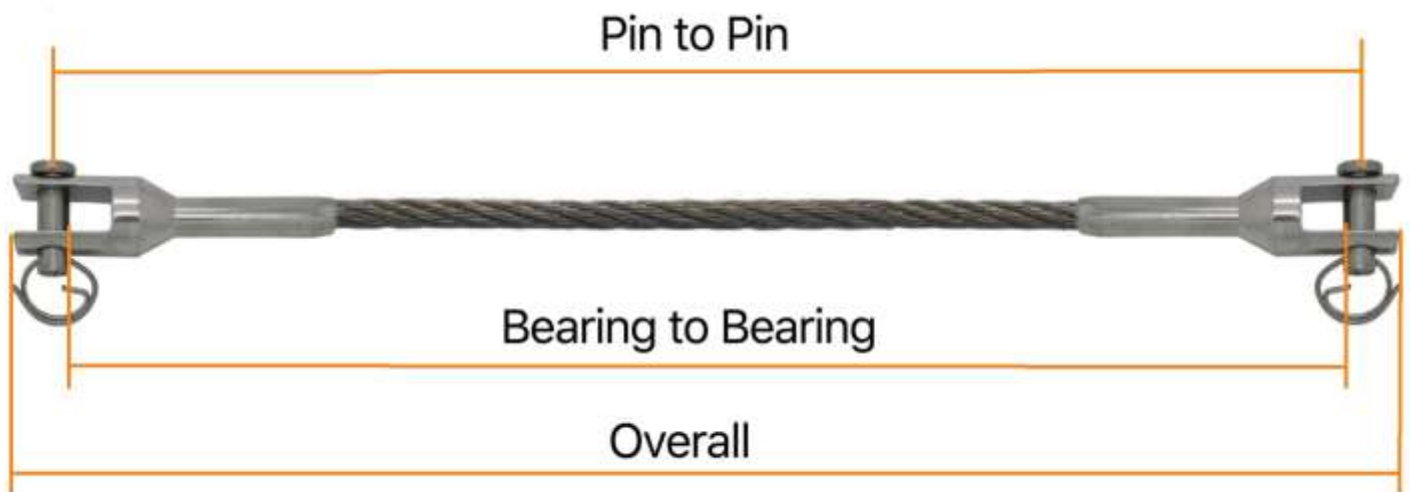

Overall – This is the outside overall measurement

Bearing Surface to Bearing Surface – This is the point where the fabrication end fittings will touch your external object

Eye to Eye / Pin to Pin Centers – This is the measurement taken from the center point of the ends, usually a Hard Eye, Soft Eye or a Pin

Other – Any other measurement? If so please leave us a note on the builder when creating your fabrication, it is always best to leave a contact number at checkout if we have any further questions to ask

Please see picture below for guidance

If you have any questions regarding your fabrication please email us sales@gsproducts.co.uk
